

FERTI TECHNOLOGIES

Ponder, Texas

PROJECT DESCRIPTION

Geisler Partners performed structural and civil engineering services for the Ferti Technologies plant in Ponder, Texas. This project took an existing 100,000 square-foot office/warehouse space and converted it into a fertilizer plant and warehouse.

Our Structural team designed the 70-foot towers inside the structure. These towers are supported by guy wires attached at the top. In addition to the towers, our team designed the foundation for large equipment inside the building. Two new exterior dock ramps were added to allow trucks easy access to the trucking bay.

Civil Services included designing paving around the plant, adding a new waterline to support fire coverage, and grading the dock ramps.
